EDUCATION

University of Houston, GPA: 3.85/4.00 — Expected December 2026

Bachelor of Science in Computer Science, Minor in Mathematics — *Houston, TX*

- **Relevant Coursework:** Artificial Intelligence, Data Science & Machine Learning, Natural Language Processing, Operating Systems, Database Systems, Software Design, Data Structures & Algorithms

WORK EXPERIENCE

Software Engineering Intern — May 2026 – August 2026

SLB — *Houston, TX*

- Packaged and deployed a DINOv2-based seismic fault detection pipeline as a GPU-accelerated MLServer inference service on SLB's internal ModelOps platform
- Engineered an end-to-end inference pipeline exposing REST API predictions and integrating input preprocessing, GPU model execution, and mask postprocessing
- Developed a custom ReAct LLM agent that orchestrates S3 seismic data retrieval, deployed model inference, evaluation, and visualization through modular LangChain tools
- Improved inference-service reliability by implementing exponential-backoff retries, automatic reauthentication, and resolving intermittent deployment failures in the Kubernetes-based serving environment

Computer Science Tutor — January 2026 – Present

ConocoPhillips Computer Science Learning Center, University of Houston — *Houston, TX*

- Tutor students in data structures, algorithms, operating systems, Python, and C++, reinforcing algorithmic problem solving and software engineering fundamentals

Product Management Intern — May 2025 – August 2025

Sabre Corporation — *Southlake, TX*

- Owned the 6-sprint delivery of a flight-booking data simulator, defining technical scope and coordinating 15+ engineers across 5 teams
- Designed a 35,000-request booking scenario to validate AI experimentation (multi-armed bandit testing), demonstrating ~10% potential revenue uplift in a live demo to a major international airline

RESEARCH EXPERIENCE

Undergraduate Student Researcher — December 2024 – May 2025

University of Houston (PI: Weidong Shi)

- Built a Python evaluation framework benchmarking 7 large language models across 500+ programming and medical tasks using automated API pipelines
- Designed fault-tolerant evaluation workflows with automated code execution and verification for large-scale AI model assessment

PROJECTS

Full-Stack Library Management System | *React, Node.js, MySQL, AWS*

- Built a REST API supporting transactional workflows, waitlists, and conflict resolution with SQL constraints/triggers
- Deployed MySQL on AWS RDS and integrated S3 for scalable data and media storage

Croquis Bot | *React, Python, Flask, Render, Netlify*

- Built a full-stack Discord-integrated tool used by a 1,000+ member art community to automate timed drawing sessions and asset rotation
- Developed a React dashboard for configuring custom sessions through a Flask API backend, improving workflow flexibility for community users

LEADERSHIP & INVOLVEMENT

CSGirls — December 2024 – Present

Vice President — *Houston, TX*

- Organize technical and professional development events for 500+ members in collaboration with industry partners

SKILLS

- **Languages:** Python, C++, Java, JavaScript, SQL, R, HTML, CSS
- **Frameworks & Libraries:** PyTorch, Scikit-learn, LangChain, SBERT, Pandas, NumPy, React, Node.js, Flask
- **Tools & Platforms:** Docker, Kubernetes, AWS (S3, RDS), Git, GitHub, Linux, MySQL, BigQuery, Looker, Rally, Azure DevOps
